# What Is Done & What Is Left

Bale Drop Product & Engineering Summary • October 27, 2026

| 26 Web Routes | 17 Edge Functions | 46 SQL Migrations | CI + 54 Checks |
|---|---|---|---|
| Storefront, Vendor & Admin | Paystack, Splits & Escrow | Core Ledger, Search & RLS | 12 Unit Suites & 42 SQL Tests |

## 1. What Is Done

COMPLETED

| AREA | DELIVERED CAPABILITIES |
|---|---|
| **Storefront & Catalog**<br>Next.js 15 + PWA | Mobile-first storefront with official Bale Drop branding, installable PWA icons, and light/dark themes. Includes homepage, public vendor storefronts (/vendor/[id]), listing photo galleries (Supabase Storage), wishlists, saved delivery addresses, slide-out Cart Drawer, and cross-device cart sync. |
| **Search & Discovery**<br>Postgres FTS (0026) | Ranked full-text catalog search (search_products RPC) with Nigerian thrift/Okirika synonyms, URL-persisted filters, exact pagination, and Save Search action (/search). |
| **Bale Split Lifecycle**<br>Group Buy (0022) | End-to-end group-buy flow: approved vendors create splits (2–50 slots, per-slot price, deadline) via split-action; buyers claim slots transactionally with row locks and live Realtime counters; filled splits settle atomically with commission & queued payouts; expired splits auto-refund via bale-expiry. |
| **Payments & Escrow**<br>Paystack + Ledger | Server-reconciled checkout (paystack-initialize) with launch delivery subsidy, promo code reservation/caps (0025), atomic stock reservation, and idempotency keys. HMAC-verified paystack-webhook finalization, append-only transactions ledger, 48-hour auto escrow release (escrow-release), dispute freeze, and lease-locked refund/payout reconciliation. |
| **Orders, Receipts & Disputes**<br>Buyer Post-Purchase | 5-step order tracking timeline, paid Bale Split slot history, printable server-verified receipts (/orders/[id]), delivery confirmation, dispute filing with private photo/PDF evidence, and buyer reviews. |
| **Vendor & Admin Consoles**<br>/sell • /vendor • /admin | 3-step vendor onboarding wizard and workspace for listing management (create/pause/resume/resubmit), splits, dispatch, KYC uploads, and payout statements. Admin console for signed-URL KYC review, moderation, disputes, payouts, append-only money ledger, 7-day funnel, promo codes, audit trail, and threaded support with 12h SLA flags. |
| **Auth, Push & Security**<br>RLS + CI Hardening | Email/password & OAuth callback flows, leaked-password check (HIBP), /welcome onboarding, Realtime inbox, Web Push (sw.js + push-send), Resend/Termii email & SMS hooks, Edge rate limiting & upload caps (0027), column-level privilege & Storage RLS hardening (0031–0032), and GitHub Actions CI. |

## 2. What Is Left

REMAINING

| WORKSTREAM | STAGE | REMAINING SCOPE |
|---|---|---|
| **Live Environment, Secrets & Backups** | Launch Blocker | Provision the production Supabase project, apply migrations 0001–0046, enable Point-in-Time Recovery (PITR) backups, and run one restore drill. Configure live Paystack keys & webhook URL, CRON_SECRET, RESEND_API_KEY (email), TERMII_API_KEY (SMS), VAPID keys (Web Push), and ALERT_WEBHOOK_URL, then deploy the web app to its production domain. |
| **Cron Schedules & Push Webhook** | Launch Blocker | Activate the 3 scheduled Supabase Cron jobs — bale-expiry (every 5 min), escrow-release (every 15 min), and payout-reconcile (every 15 min) — plus the public.notifications INSERT Database Webhook targeting push-send. |
| **Real Courier Integration** | Launch Blocker | Replace the sandbox tracking generator in logistics-create (testTracking()) with a contracted Nigerian delivery carrier API (e.g., Kwik or Sendbox) and wire live LOGISTICS_WEBHOOK_SECRET status updates. |
| **Browser E2E & Form CAPTCHA** | Pre-Launch QA | Expand Playwright beyond the 6-line /search smoke test (e2e/search.spec.ts) to cover full browser checkout › Paystack test webhook › order timeline › delivery confirmation. Add Turnstile/CAPTCHA on signup, login, and guest support forms. |
| **Harden & Wire Post-MVP Scaffolds** | Post-MVP | Enable RLS (ENABLE ROW LEVEL SECURITY), policies, and explicit client grants on tables added in migrations 0034–0045 (required after 0031 revoked default client writes), and add saved-search alert matching. Mount and connect the 13 standalone UI components (review photos/vendor replies, referrals, Paystack subaccounts, payout batching, cohorts, waitlists, recommendations, bundles, return requests, vendor scorecards, image transforms, feature flags, read-replica routing) into app routes and Edge Functions. |
| **Expo Mobile App (apps/mobile)** | Post-Launch | Build the iOS and Android React Native (Expo) application sharing @bale-drop/database. Currently a minimal 11-line placeholder screen ('Bale Drop Mobile'), scheduled after web PWA launch per ADR-001. |

### Launch Readiness Summary

Core web commerce, Bale Split group-buying, Paystack escrow/ledger accounting, vendor/admin operations, and database RLS hardening are built and verified in CI. Going live requires provisioning production Supabase + Paystack credentials, scheduling the 3 cron jobs and push webhook, enabling PITR backups, and connecting a live logistics carrier.
